

DAY 101: DAY TRADING CRASH COURSE #1

> MASTERING MARKET
STRUCTURE & TRENDS

> (+\$4.5M WITHDRAW EDITION)

The Ultimate Cheat Code

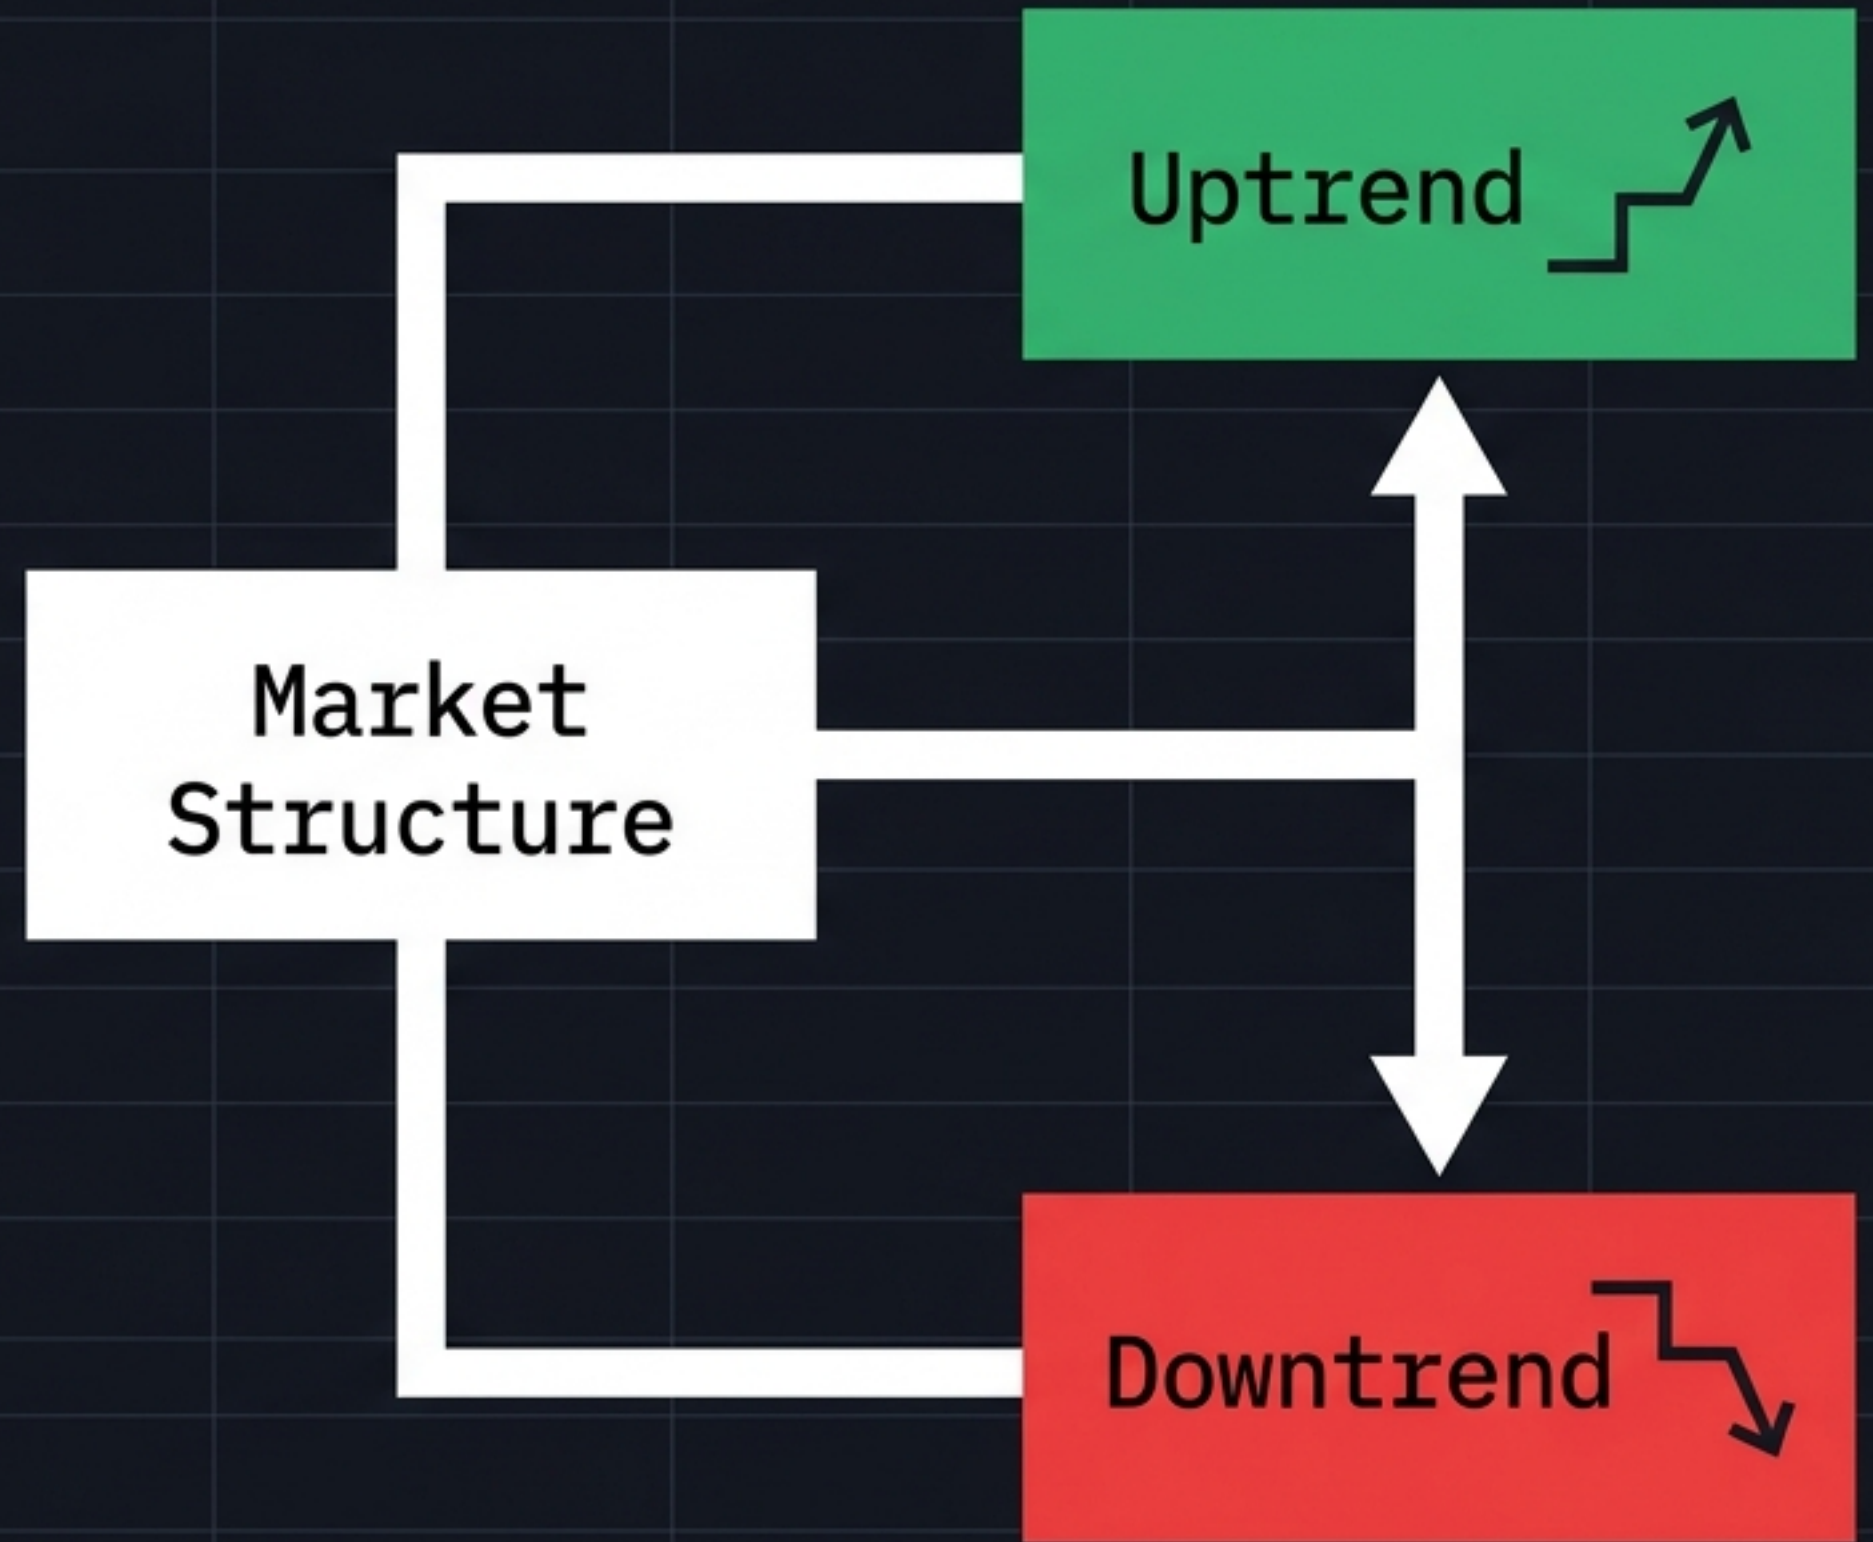

Market structure is the foundational cheat code for all trades

Price can only move in two definitive trending directions: up or down

Structure provides predictable rules in a chaotic market

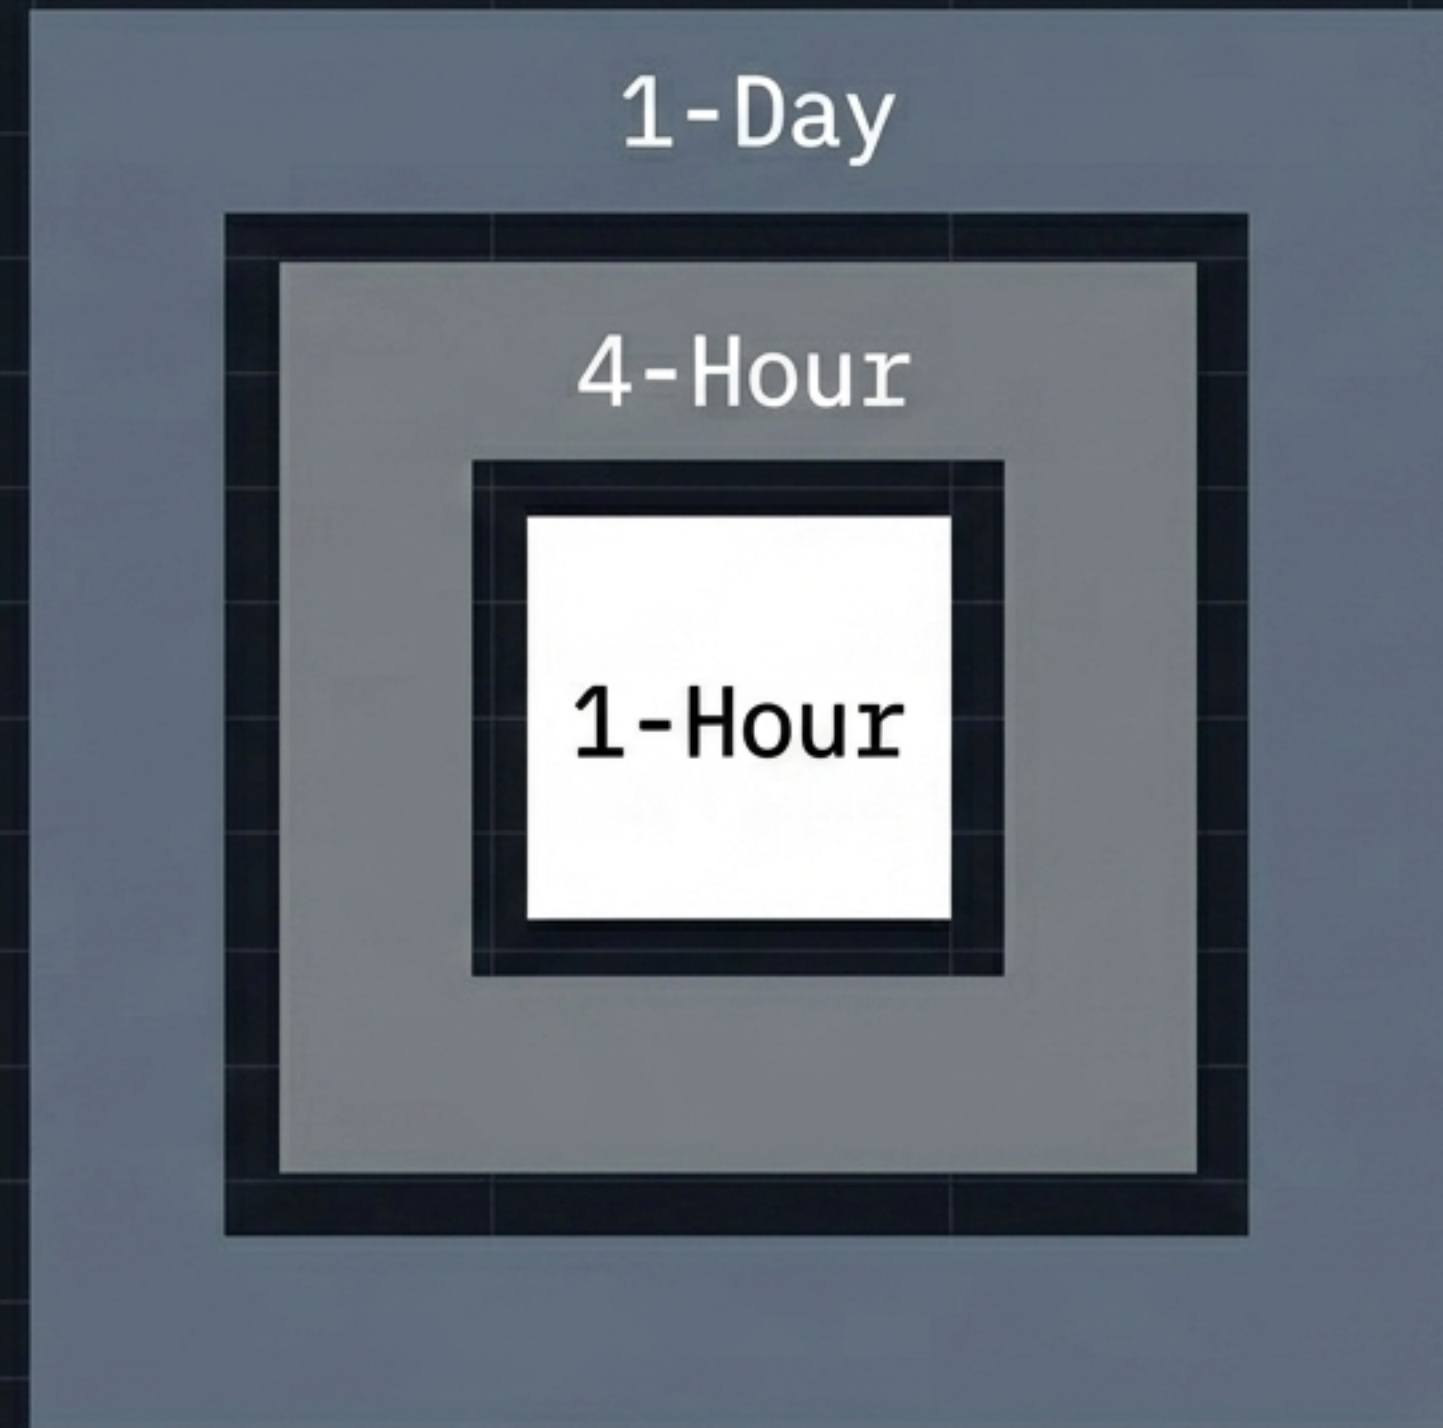

The Rule of Timeframes

Market structure does not break easily on higher timeframes

Always utilize the 1-Hour, 4-Hour, and Daily charts for accuracy

Lower timeframes produce false signals; higher timeframes provide the standard

The Baseline Requirement

You cannot identify a trend without a starting point to compare it to

Locate the absolute highest point before a sell-off (The High)

Locate the absolute lowest point before a strong buy (The Low)

Wait for price to break out of these boundaries to confirm direction

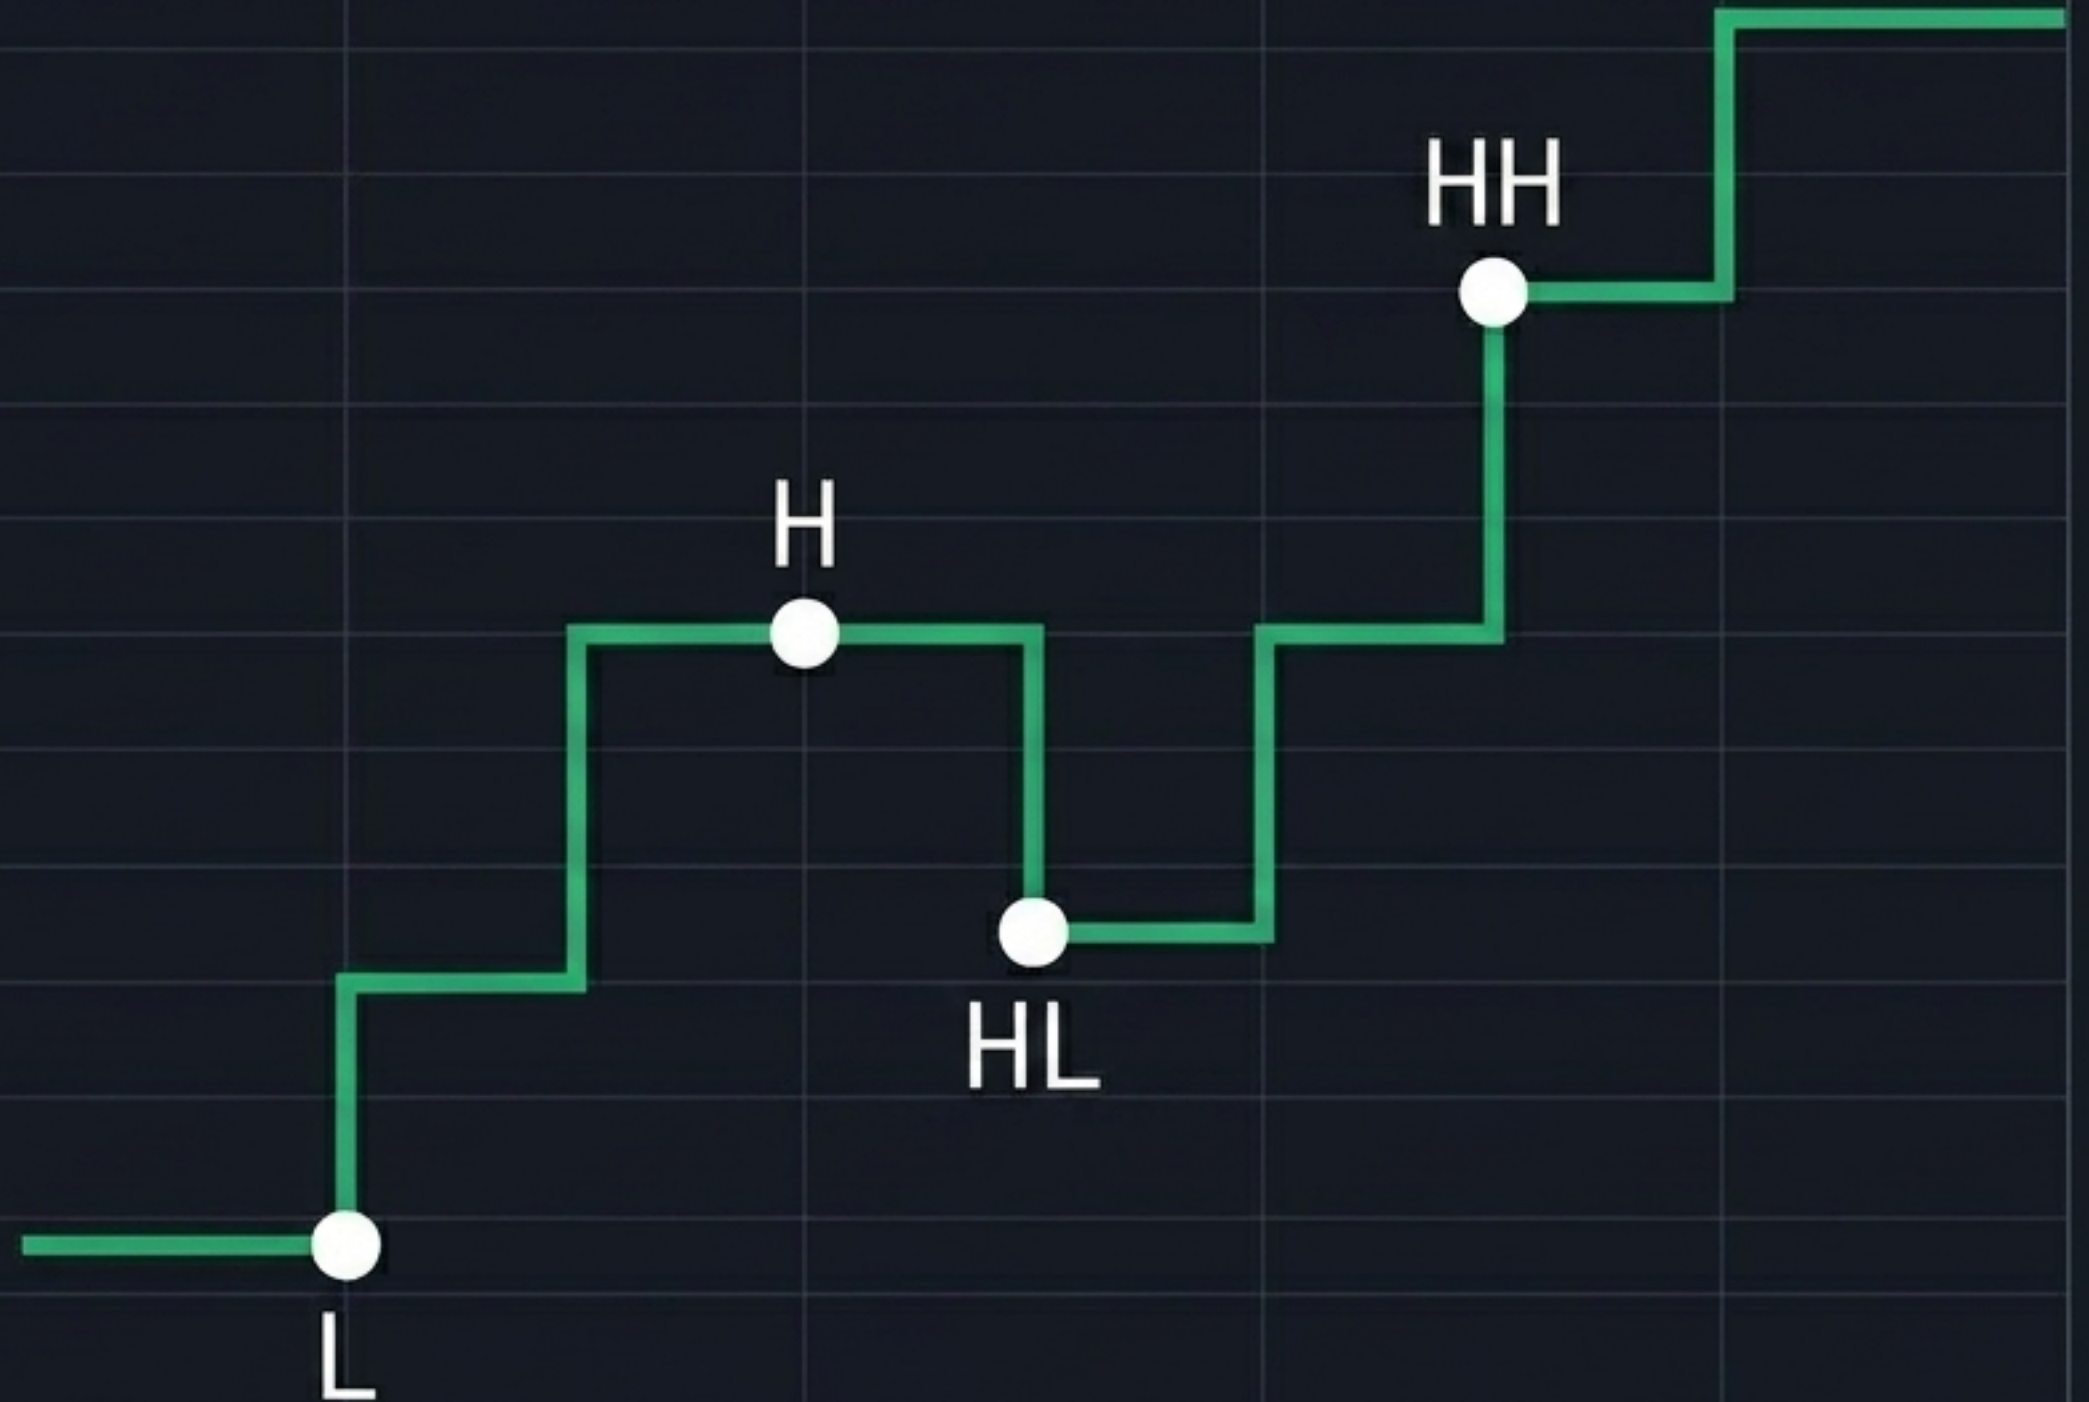

The Uptrend Anatomy

An uptrend forms when price continuously makes Higher Highs (HH) and Higher Lows (HL)

A High only becomes a Higher High when price breaks above the previous High

The structure remains intact as long as the Higher Lows are respected

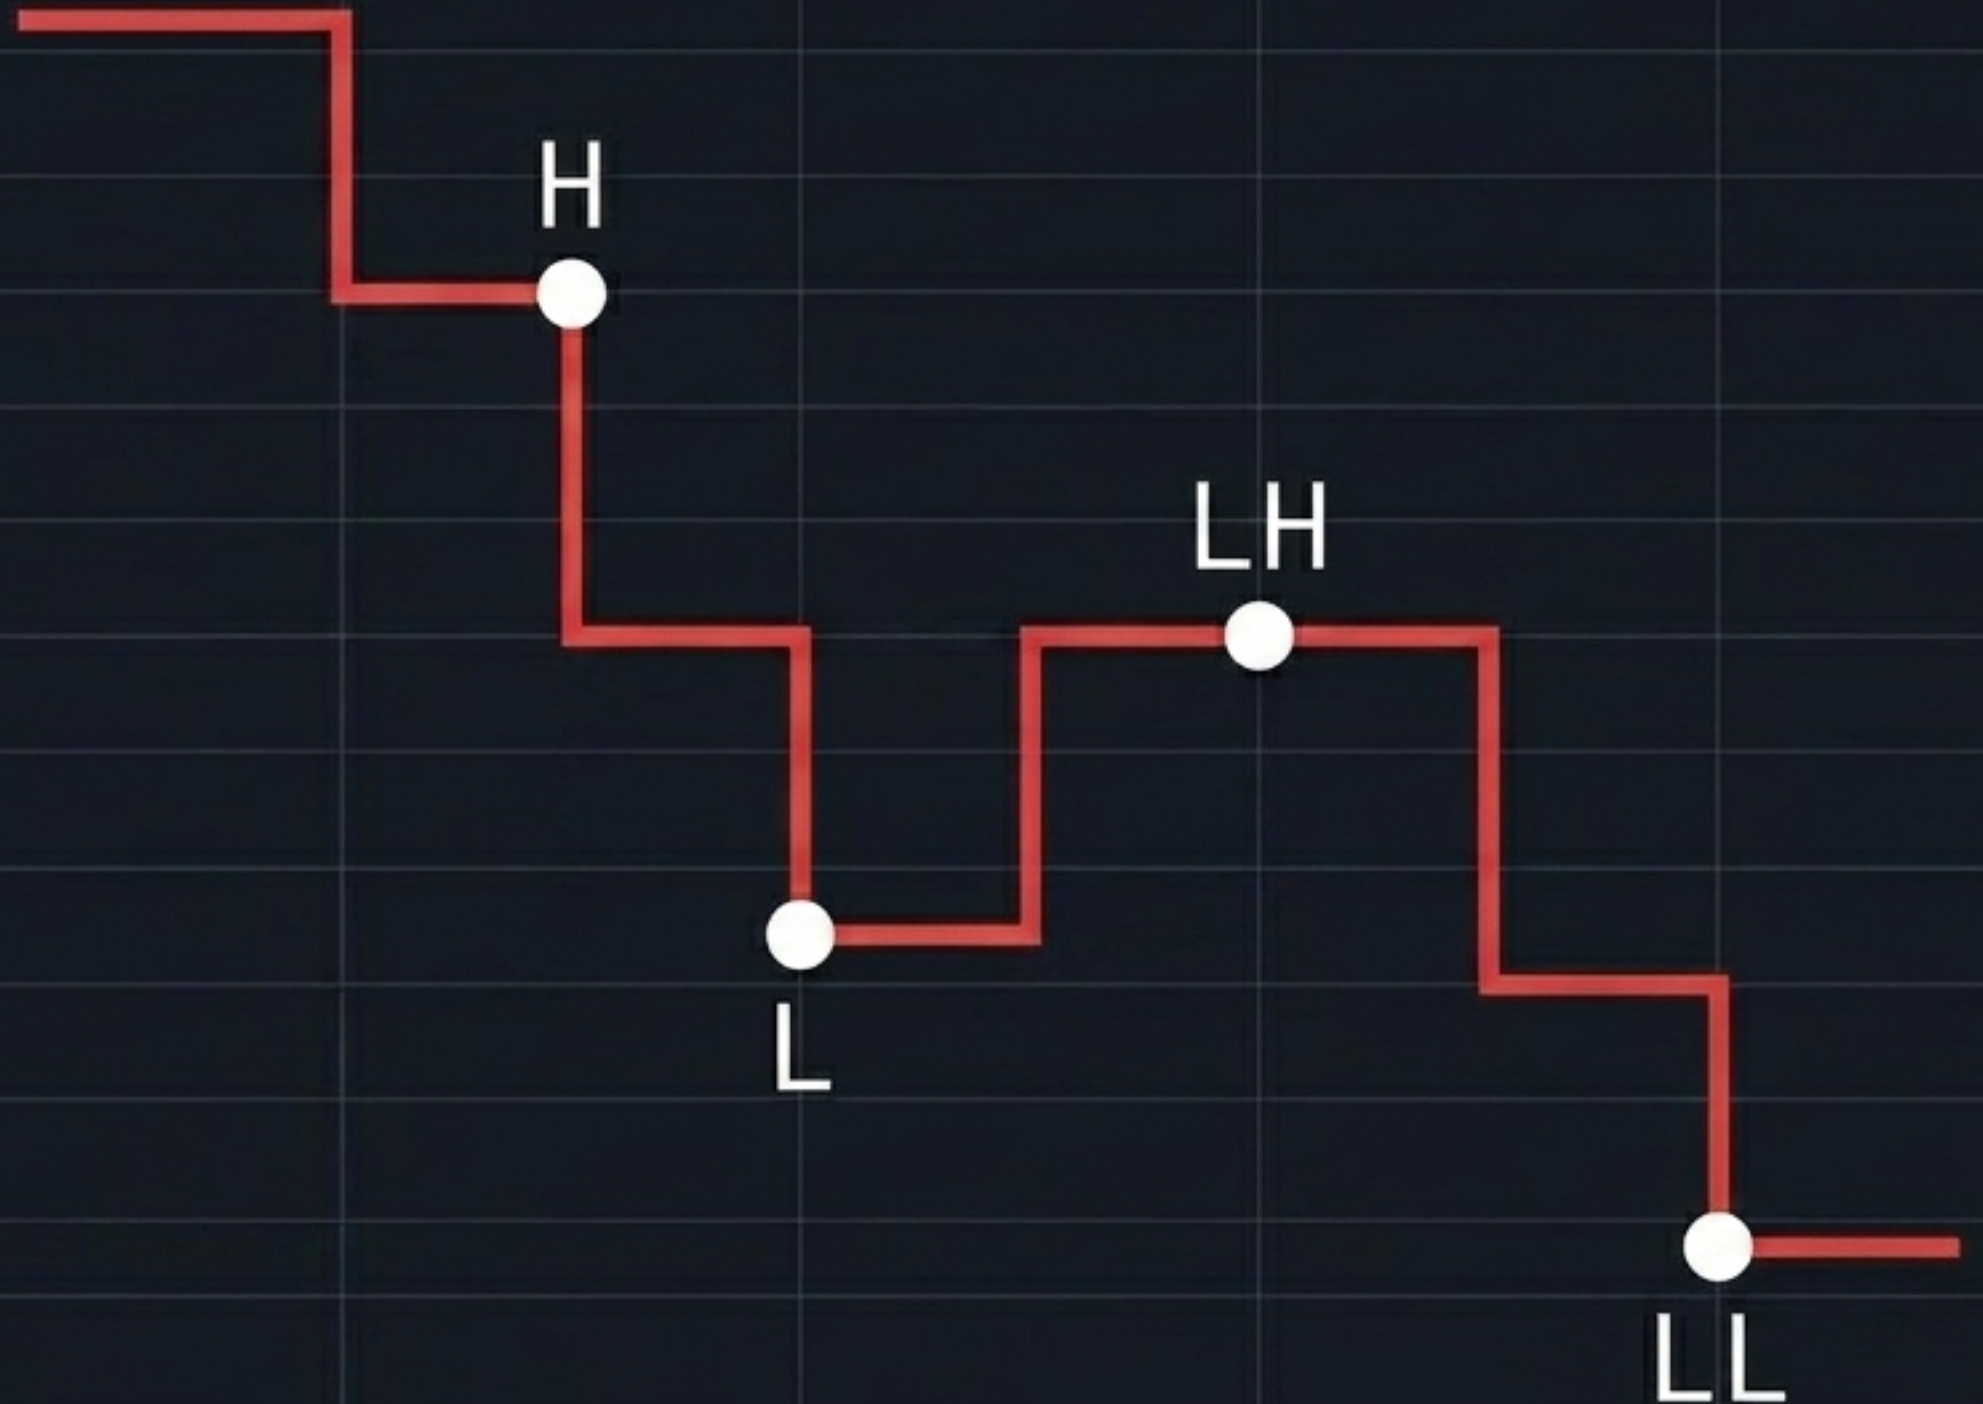

The Downtrend Anatomy

A downtrend forms when price continuously makes Lower Highs (LH) and Lower Lows (LL)

A Low only becomes a Lower Low when price breaks below the previous Low

The structure remains intact as long as the Lower Highs are respected

The Ranging Void

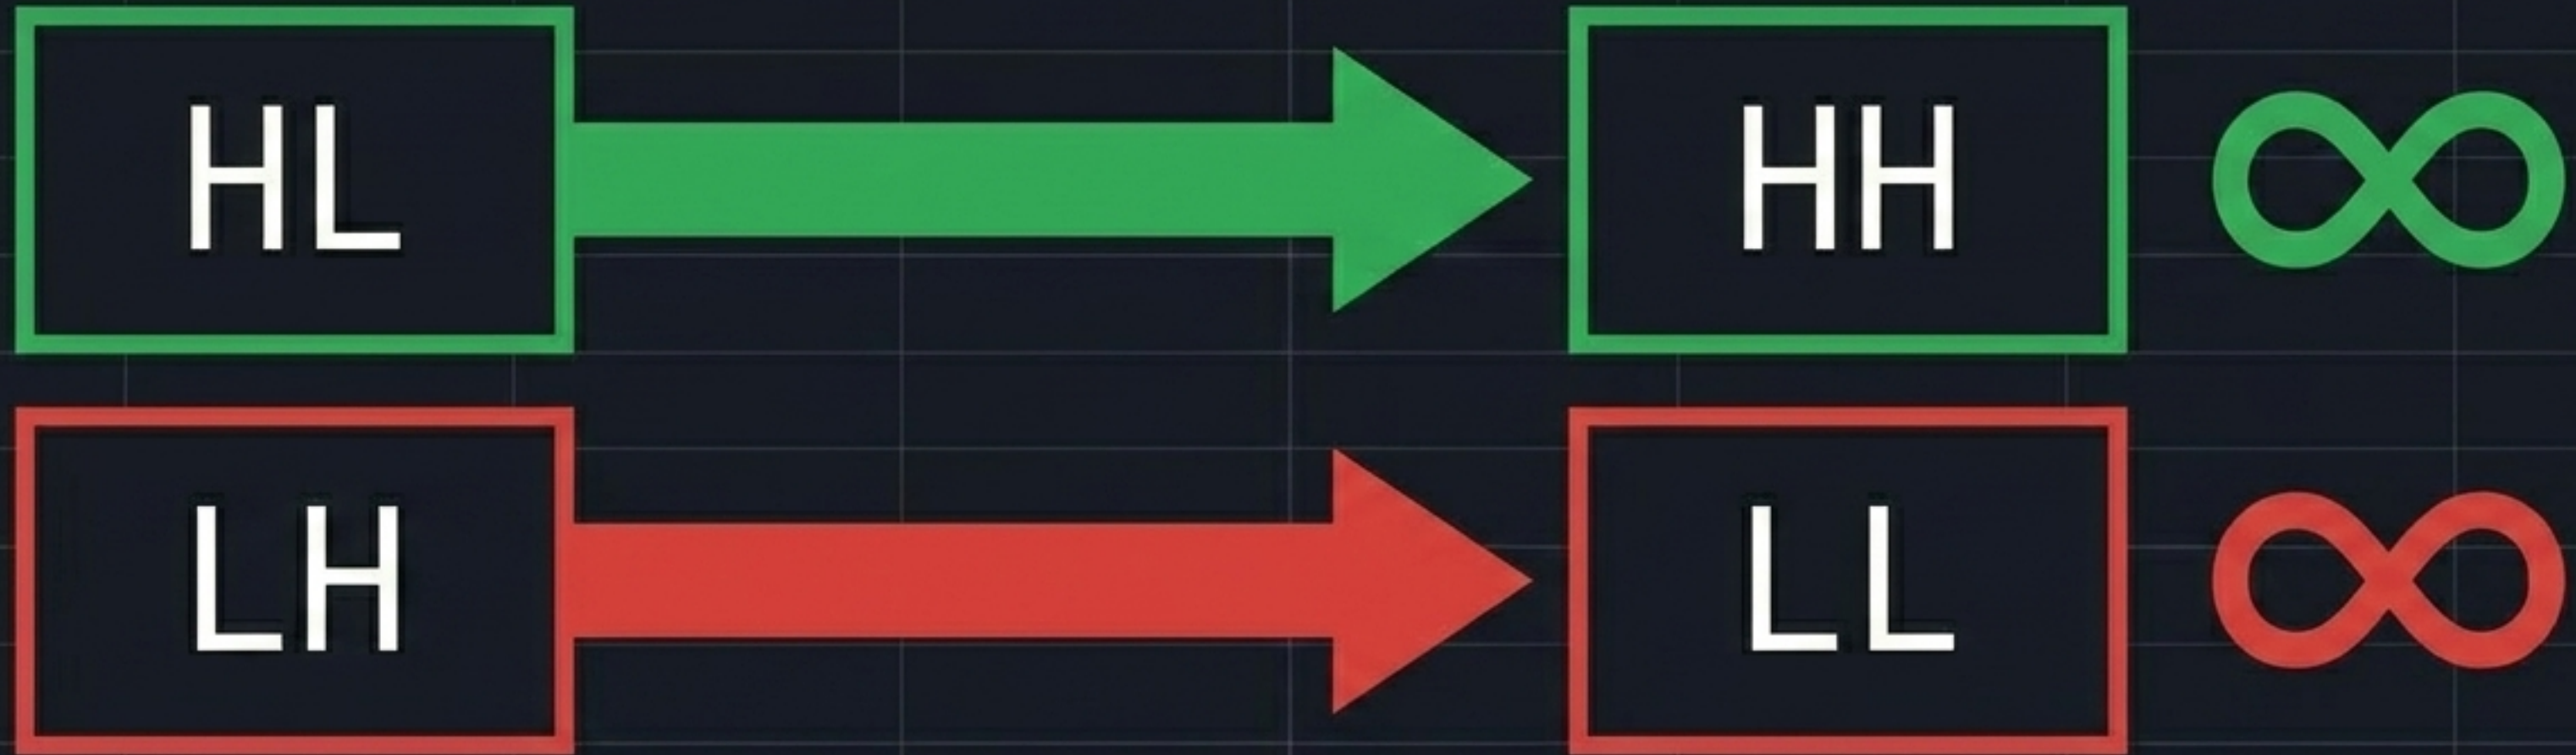

Price trapped between
an equal High and equal
Low is in a Range

There are no Higher
Highs or Lower Lows
inside a range

Avoid forcing trend
rules until price
breaks the structure

The Predictive Sequence

If price makes a Higher Low (HL), it is programmed to seek a Higher High (HH)

If price makes a Lower High (LH), it is programmed to seek a Lower Low (LL)

This sequence repeats infinitely until the higher timeframe structure breaks

The Execution Strategy

Never chase the
highest or lowest
price points for entry

Buy Entries: Execute
solely from confirmed
Higher Lows (HL)

Sell Entries: Execute
solely from confirmed
Lower Highs (LH)
