

The ICC Price Action Playbook

Mastering Market Structure, Liquidity, and Continuation

Predicting the Market

Relying on lagging indicators, backtesting dead data from years ago, and panic-buying breakouts fueled by FOMO.
Result: Overcomplicated analysis and targeted stop-losses.

Reading the Market

Pure price action.
Strip the chart to the last 1-3 sessions.
Identify the raw structural levels.
Wait for the market to reveal its plan.

The Unbreakable Rule of Market Structure

The market moves in calculated trends. It builds structural bricks of highs and lows.

The Golden Rule

Price does not break structure unless it is intentionally reversing or consolidating.

The Discipline

If the trend stops following the rules, stay away. Never put your capital into a market that breaks its own structural laws.

Mapping the Battlefield: Anatomy of a Zone

Find the extremes of the current price action. These are physical locations where institutional buyers and sellers have drawn lines in the sand.

When price is trapped between a high and a low with no clear indication, do not guess. Sit on your hands and wait for a break.

The ICC Core Engine

The market follows a continuous, predictable, and exploitable three-step cycle. Simply execute when the cycle completes.

Phase 1: Indication (The Signal Fire)

An Indication occurs when price breaks above a Swing High or below a Swing Low on the 1H or 4H timeframe.

What it means

The market has selected a direction.
Momentum has shifted.

The Critical Rule

This is INFORMATION, not an entry signal.

The Amateur Mistake

Never trade the Indication. Amateurs see the breakout, feel FOMO, and buy the top. This positions them perfectly for the slaughter.

The Pressure Metaphor

Understand the Indication and the Correction as two sides of the exact same event.

1. Consolidation (The Shake)

The market builds **pressure** and **accumulates capital** inside a tight zone.

STATUS: PRESSURE_BUILDING. INITIAL_ACCUMULATION.

2. Indication (The Explosion)

The **pressure becomes too great**. The **cap flies off**. The breakout is **highly visible**, drawing everyone's attention.

EVENT: INDICATOR_SIGNAL. BREAKOUT_CONFIRMED. MOMENTUM_SHIFT.

3. Correction (The Cleanup)

The **inevitable, messy fizz** that follows the explosion. The market must **clean up the chaos** before the **sustainable** trend can begin.

PHASE: CORRECTION_SEQUENCE. MARKET_CLEANUP. LIQUIDITY_GRAB.

The Psychology of the Trap

Retail emotions equal institutional liquidity. Why the market immediately reverses after an explosive breakout.

The Trap & The Grab

Early and Late FOMO traders pile in, placing stop-losses below the move.

To the market, those stops are a pool of cash.

It dips directly into that pool to fuel the real, sustainable trend.

The Liquidity Grab:
Triggers stop-losses to steal capital and fuel the real trend

Phase 2: Correction (The Cleanup)

A Correction is a calculated pause. It is not a failed trade; it is the market showing its hand.

Mindset Shift

- ↳ Stop seeing pullbacks as a threat.
- ↳ Start seeing pullbacks as the market reloading capital.

The Setup

Once the market has grabbed enough liquidity from the FOMO traders, the Correction will lose momentum. It will fail to break the previous underlying structure, setting the stage for the real strike.

STATUS: CORRECTION_PHASE. CAPITAL_RELOADING. OPPORTUNITY_IDENTIFIED.

Timeframe Correlation: Satellite vs. Microscope

You cannot monitor the entire ICC cycle on a single timeframe. The timeframes must align.

The Satellite (1H / 4H)

Map the battlefield. Mark your Swing Highs and Lows. Wait for the macro Indication to reveal the trend direction.

The Microscope (15m / 5m)

Once the Indication happens, zoom in. Monitor the messy Correction down here. Wait for the micro-structure to align back with the macro-trend.

Phase 3: Continuation (The Strike)

The cleanup is finished. The micro chart shifts structure to realign with the macro Indication.

TARGET : Take Profit (Aim for the previous Swing level established during the Indication phase).

ENTRY : Trigger when micro timeframe breaks structure back in the direction of macro trend.

DEFENSE : Stop-Loss (safely behind newly formed support/resistance structure).

STATUS: CONTINUATION_PHASE. EXECUTION_TRIGGERED. MOMENTUM_ALIGNED.

Execution Requires Volume

ICC requires institutional momentum to complete the cycle. Do not trade dead hours or stagnant assets.

The Action Zones

Execute exclusively during the London and New York overlapping sessions (e.g., 9:30 AM EST bell).

The Assets

Trade highly volatile, high-volume instruments like Gold, NASDAQ, and US30. Ignore low-tier pairs that lack the capital to drive clean continuations.

Diagnostic: Amateur vs. ICC Pro

Evaluate your operational habits against the methodology.

	Amateur ❌	ICC Pro ✅
Entry Trigger	Trades the explosive breakout (FOMO).	Trades the patient Continuation (Alignment).
Analysis Base	Relies on lagging indicators.	Relies on pure market structure and swings.
Market Data	Backtests 5-year-old 'dead data'.	Reads live market reactions and volume.
During Pullbacks	Panics, closes trade, or revenge trades.	Monitors the 15m chart, waiting for the liquidity grab to finish.

The 5-Step Daily Game Plan

Standard Operating Procedure

1

Clear the Noise.

Strip your chart down to the last 1-3 sessions. No indicators.

2

Map the Swings.

Use the 1H/4H Satellite view to mark **Swing Highs (Sellers)** and **Swing Lows (Buyers)**.

3

Wait for Indication.

Let price break a swing level. **Remember: This is information, not an entry.**

4

Zoom In.

Switch to the 15m/5m **Microscope view** to monitor the messy **Correction**.

5

Strike on Alignment.

Enter only when the **15m structure shifts** back in the direction of the **1H Indication**.

“The market just showed you its cards. The only thing standing between you and the trade is your own patience.”

Follow the structure. Preserve your capital. Trade the continuation.
